TITLE

Development of a standard operational blasting database for use within the mineral industry

ARTICLE

This is a MIST funded project involving the Department of Mining and Mineral Engineering at the University of Leeds.

The recording of information is critical to the blasting process. The review and analysis of past data can play a key part in the blast's design.

The most efficient method of data management is by means of a computerised database. The project aimed to produce a bespoke blasting database system to meet the requirements of the industry.

A full copy of the report can be found at www.mi-st.org.uk or follow the link to the website from the links page. Project MA/2/4/005.
