

Safer by Sharing Seminar 2019

Book now FREE OF CHARGE and gain 3 hours CPD

The Fatal 6

In response to the identified “Fatal 6”, the Safer by Sharing Seminars for 2019 will focus on two key elements ...

Isolation of Energy and Lock-Off
Falls from and Working at Height

MPA Associate Members Reece Safety Products Ltd and 3M UK Ltd have agreed to support the seminars on this occasion with presentations by Lee Emmett from Reece on “Isolation and Lock-off” and Steve Morris of 3M on “Working at Height”. Lee and Steve are both active members of the relevant individual MPA Working Groups.

Seminars

The Seminars will be in two parts and the interactive presentations will cover what is required by the 4P's, namely -

People
Plant
Process
Performance

Lee Emmett will discuss the key components required to reduce the risk of harm when there is a failure to isolate all energy sources correctly. He will use “real life” case studies, from a wide range of scenarios identified during audits of operational environments, to highlight the risks.

The MPA publications on “LOTOTO” and “Contact with Moving Machinery and Isolation” will be available on the day.

Steve Morris will give an overview of the risks associated with “Working at Height”, with attention being drawn to the initial risk assessment and the determination of a safe work zone. Currently, the Working Group is developing MPA guidance documents but they are not as far advanced as other Working Groups.
