TITLE

Rollover prevention programme

COUNTRY OF ORIGIN:

ARTICLE

CEMEX operates a variety of large goods vehicles to deliver their products – concrete mixers, aggregate tippers, bulk powder tankers and vehicles for concrete products and packed cement. All these vehicles can be prone to rollover under certain conditions which can have devastating consequences.

In recognition of this issue, they produced several safety initiatives including films for the industry about rollovers; the last was a campaign predominantly aimed at rollovers of tipping vehicles.
