## TITLE

## Pigment chute for mixer box

## **ARTICLE**

A pigment chute has been fitted to the mixer box, which has effected a major reduction in manual handling. The chute has been constructed with rollers along the base, enabling the pigment bags to roll into the mixer with ease, thus removing the need for pushing or pulling. The design is not unique, but has been developed so that 20kg bags of red pigment can be emptied directly into the mixer box safely and easily.
